Optacryl® 60 (koflocon A)
Rigid Gas Permeable Lenses for Daily Wear

Shipped Dry; or, Wet Shipped in Solution

IMPORTANT

Please read carefully and keep this information for future use.

PROBLEMS WITH CONTACT LENSES AND LENS CARE PRODUCTS COULD RESULT IN SERIOUS INJURY TO THE EYE. It is essential that you follow your eye care practitioner's directions and all labeling instructions for proper use of your contact lenses and lens care products. EYE PROBLEMS, INCLUDING CORNEAL ULCERS, CAN DEVELOP RAPIDLY AND LEAD TO LOSS OF VISION; THEREFORE, IF YOU EXPERIENCE EYE DISCOMFORT, EXCESSIVE TEARING, VISION CHANGES, OR REDNESS OF THE EYE, OR OTHER PROBLEMS WITH YOUR EYES, IMMEDIATELY REMOVE YOUR LENSES, AND PROMPTLY CONTACT YOUR EYE CARE PRACTITIONER.
OPTACRYL® 60
(kolfocon A)

RIGID GAS PERMEABLE CONTACT LENSES FOR
DAILY WEAR

Daily Wear Spherical contact lenses for:

- Nearsightedness (myopia).
- Farsightedness (hyperopia).

DESCRIPTION

Optacryl® 60 (kolfocon A) rigid gas permeable contact lenses for daily wear are available as lathe cut firm contact lenses with spherical anterior and posterior surfaces. The posterior curve is selected so as to properly fit an individual eye and the anterior curve is selected to provide the necessary optical power to correct refractive error. A peripheral curve system on the posterior surface allows tear exchange between the lens and the cornea.

The Optacryl® 60 rigid gas permeable contact lens material is a thermoset copolymer derived from siloxane and methylmethacrylate.

The lens material is available in blue, green, or gray versions. The blue lens contains Microlith Blue 4 G-K; the green lens contains Sunfast Green No. 7; and, the gray lens contains D&C Green No. 6, D&C Violet No. 2, and Perox Yellow No. 9 as the color additives.

The lenses have the following attributes.

Optacryl® 60 (kolfocon A)

**ACTION**

When placed on the human cornea, the Optacryl® 60 (k后者con A) rigid gas permeable contact lens acts as a refracting medium to focus light rays upon the retina.

**INDICATIONS (USES)**

The Optacryl® 60 (k后者con A) rigid gas permeable contact lens is indicated for daily wear for the correction of visual acuity in not-aphakic persons with non-diseased eyes who are nearsighted (myopic) or farsighted (hyperopic) and may exhibit corneal astigmatism up to 4.00 diopters that does not interfere with visual acuity.

**CONTRAINDICATIONS (REASONS NOT TO USE)**

Optacryl® 60 rigid gas permeable contact lenses are contraindicated by the presence of any of the following conditions:

- Acute or subacute inflammations of the anterior segment of the eye.
- Any disease which affects the cornea or conjunctiva.
- Insufficiency of lacrimal secretion (dry eyes).
- Corneal hypoesthesia (reduced corneal sensitivity).
- Any systemic disease, which may affect the eye or be exacerbated by wearing contact lenses.
- Allergic reactions of ocular surfaces or adnexa which may be induced or exaggerated by wearing contact lenses and/or using contact lens solutions.
- Any active corneal infection (bacterial, fungal or viral).

**WARNINGS**

**PROBLEMS WITH CONTACT LENSES AND LENS CARE PRODUCTS COULD RESULT IN SERIOUS INJURY TO THE EYE.** It is essential that you follow your eye care practitioner's directions and all labeling instructions for proper use of your contact lenses and lens care products. **EYE PROBLEMS, INCLUDING CORNEAL ULcers, CAN DEVELOP RAPIDLY AND LEAD TO LOSS OF VISION; THEREFORE, IF YOU EXPERIENCE EYE DISCOMFORT, EXCESSIVE TEARING, VISION CHANGES, OR REDNESS OF THE EYE, OR OTHER PROBLEMS WITH YOUR EYES, IMMEDIATELY REMOVE YOUR LENSES, AND PROMPTLY CONTACT YOUR EYE CARE PRACTITIONER.**

The risk of ulcerative keratitis has been shown to be greater among wearers of extended wear lenses than among wearers of daily wear lenses. The risk among extended wear lens wearers increases with the number of consecutive days that lenses are worn between removals, beginning with the first overnight use. This risk can be reduced by carefully following directions for routine lens care, including cleaning of the lens storage case. Additionally, smoking increases the risk of ulcerative keratitis for contact lens wearers.
It is recommended that contact lens wearers see their eye care practitioner twice a year or, if directed, more frequently.

PRECAUTIONS – PRACTITIONER

Clinical studies have demonstrated that contact lenses manufactured from the Optacryl® 60 rigid gas permeable contact lens material are safe and effective for their intended use. However, the clinical studies may not have included all design configurations or lens parameters that are presently available in the materials.

Consequently, when selecting an appropriate lens design and parameter, the eye care practitioner must consider all factors that affect lens performance and ocular health. The potential impact of these factors must be weighed against the patient's needs, therefore, the continuing ocular health of the patient and lens performance on the eye should be carefully monitored.

Each Optacryl® 60 lens is supplied nonsterile in an individual plastic case. The lens is shipped dry; or, wet shipped in solution. This solution contains poloxamine, hydroxyalklphosphonate, boric acid, sodium borate, sodium chloride, hydroxypropylmethyl cellulose, Glucam and preserved with chlorhexidine gluconate (0.003%), polyaminopropyl biguaniide (0.0005%). If the patient has experienced a prior history of allergy to any of these ingredients, remove the lens from the solution and soak the lens 24 hours in sterile unpreserved saline prior to cleaning, disinfecting and dispensing.

Never reuse the solution. You may store the lens in the unopened container until ready to dispense, up to a maximum of thirty (30) days from the Fill Date (see container). When a lens has been stored for 30 days in its original packaging solution, it should be cleaned and disinfected with an FDA approved product, and placed into inventory as you presently do with any other RGP lens held in your office. Follow the directions on the selected disinfecting solution regarding prolonged storage.

PRECAUTIONS - PATIENT

Follow the instructions below to prevent damage to your eyes or to your lenses.

• Before you leave your practitioner’s office be able to promptly remove your lens or have someone else be able to remove your lens for you.

• DO NOT WEAR YOUR OPTACRYL® 60 RIGID GAS PERMEABLE CONTACT LENSES WHILE SLEEPING.

• Always wash your hands with an additive free soap, rinse thoroughly and dry on a lint free towel before you handle your lenses. Eye irritation may result if cosmetics, lotions, soaps, creams and deodorants come in contact with your lenses and if the lenses are contaminated by infectious or non-infectious debris.

• Always follow the recommended lens care system for your Optacryl® 60 lenses. Use the recommended lens care solutions and carefully follow the recommended directions.

• Always use FRESH rinsing, disinfecting and storage solutions.

• Do not use saliva, tap water or anything other than the recommended solutions to wet your lenses.

• Always keep the lenses completely immersed in the recommended storage solution when the lenses are not being worn.
• Avoid using aerosol products such as hair spray while wearing your lenses. If hair sprays are used, keep your eyes closed until the spray has settled, otherwise, the lenses may be damaged.

• Avoid all harmful or irritating vapors and fumes while wearing your lenses.

• Do not swim with your lenses in place.

• Never use tweezers or other tools to remove your lens from the lens container. Do not touch the lens with your fingernails.

• Always inform your doctor (general health care practitioner) that you wear contact lenses.

• Always consult your eye care practitioner before using any medicine in your eyes.

• Always inform your employer that you wear contact lenses. Some jobs may require the use of protective eye equipment or may require that you not wear contact lenses.

• As with any contact lens, follow-up visits are necessary to assure continued health. CHECK WITH YOUR EYE CARE PRACTITIONER.

• To minimize lens warpage during cleaning, the lenses should be cleaned in the palm of the hand rather than between the thumb and fingers.

• Do not heat the conditioning solution and lenses.

• The safety of these lenses with medications or contact lens solutions other than those recommended has not been established.

• If your lens sticks (stops moving) on the eye, follow the recommended directions for "Care for a Sticking Lens". The lens must move freely on the eye for the continued health of the eye. If nonmovement of the lens continues, immediately consult your eye care practitioner.

CAUTION: Nonsterile. Clean and condition lenses prior to use.

ADVERSE EFFECTS (PROBLEMS AND WHAT TO DO)

The following problems may occur.

• Eyes sting, burn or itch (irritation)
• Comfort is less than when lens was first placed on eye
• Feeling of something in the eye (foreign body, scratched area, abrasion)
• Excessive pain
• Excessive watering (tearing) of the eyes
• Unusual eye secretions
• Redness of the eyes
• Reduced sharpness of vision (poor visual acuity)
• Blurred vision, rainbows, or halos around objects
• Sensitivity to light (photophobia)
• Dry eyes

If you notice any of these adverse effects, IMMEDIATELY REMOVE YOUR LENSES.

• If the discomfort or problem stops, then look closely at the lens.
• If the lens is in any way damaged, DO NOT put the lens back on your eye. Place the lens in the storage case and contact your eye care practitioner.

• If the lens has dirt, an eyelash, or other foreign body on it, or the problem stops and the lens appears undamaged, thoroughly clean, rinse and disinfect the lenses; then reinsert it.

• If the problem continues, IMMEDIATELY remove your contact lens and consult your eye care practitioner.

When any of the above symptoms occur, a serious condition such as infection, corneal ulcer, neovascularization, iritis, persistent stromal edema or GPC (giant papillary conjunctivitis) may be present. Immediately remove your lenses and seek professional identification of the problem and prompt treatment to avoid serious eye damage, including corneal scarring, opacification, blindness or loss of eye.

FITTING

Conventional methods of fitting rigid contact lenses apply to the Optacryl® 60 rigid gas permeable contact lens. For a description of fitting techniques, refer to the Professional Fitting Guide for Optacryl® 60 Rigid Gas Permeable Contact Lenses. Copies of which are available from:

Paragon Vision Sciences, Inc. 1-800-528-8279
947 E. Impala Avenue 1-480-892-7602
Mesa, Arizona 85204-6619 1-480-926-7369 FAX

CAUTION: Federal (US) law restricts this device to sale by, or on the order of a licensed practitioner.

WEARING SCHEDULE

THE WEARING SCHEDULE SHOULD BE DETERMINED BY THE EYE CARE PRACTITIONER. Patients tend to overwear their lenses initially. It is important to adhere to the initial maximum wearing schedule. Regular check-ups, as determined by the eye care practitioner, are also extremely important.

DAILY WEAR (less than 24 hours while awake)

DO NOT SLEEP WHILE WEARING YOUR OPTACRYL® 60 (kolocon A) RIGID GAS PERMEABLE CONTACT LENS.

Studies have not been completed to show that the Optacryl® 60 lens is safe to wear during sleep. There is a tendency for some patients to over wear the lens initially. It is important to adhere to the maximum wearing schedule.
LENS CARE DIRECTIONS

- Always wash your hands with an additive-free soap, rinse thoroughly and dry on a lint-free towel before you handle your contact lenses.

- Never use tweezers or other tools to remove your lens from the lens container. Pour the lens into your hand.

- Optacryl® 60 rigid gas permeable contact lenses must be both cleaned and disinfected each time you remove them. One procedure does not replace the other. Cleaning is necessary to remove mucus and film from the lens surface. Disinfecting is necessary to destroy harmful germs. Leave the Optacryl® 60 rigid gas permeable contact lenses in a storage solution for a minimum of 4 hours or as indicated on the product label. To minimize lens warpage during cleaning, the lenses should be cleaned in the palm of the hand rather than between the thumb and fingers.

- Clean one lens first. (The recommended procedure is to always clean the same lens first to avoid mix-ups). Rinse the lens thoroughly as recommended by your lens care product manufacturer to remove the cleaning solution. Place the lens into the correct storage chamber and fill the chamber with the recommended disinfection system as recommended by your eye care practitioner. Clean and rinse the other lens in the same manner and place it in its chamber.

- Tightly close the top of each chamber of the lens storage case.

- To disinfect your lenses, leave them in the solution for at least 4 hours, or as indicated on the product label.

- Do not heat the conditioning solution and lenses.

- Leave the lenses in the unopened storage case until you are ready to put them on your eyes.

- After you remove your lens from the lens case, empty and rinse your lens storage case with fresh, hot running tap water and allow it to air dry. When you next use the case, refill it with fresh storage solution.

- Optacryl® 60 rigid gas permeable contact lenses should be disinfected using only a chemical (not heat) disinfection system.

Your eye care practitioner will recommend his/her preferred, FDA approved lens care solutions for the cleaning, disinfection, storage and lubrication of your Optacryl® 60 rigid gas permeable contact lenses.

Follow the instructions provided with each lens care solution. Failure to adhere to these procedures may result in the development of serious ocular complications. A patient should not switch from one care system to another unless the eye care practitioner has determined that this is necessary. Do not mix or alternate the disinfection and storage systems unless so indicated on the product label.

CARE FOR A STICKING LENS

If the lens sticks (stops moving) on the eye, apply a few drops of a lubricating solution. Wait until the lens begins to move freely on your eye before removing it. If nonmovement of the lens continues, immediately consult your eye care practitioner.

HOW SUPPLIED

Each Optacryl® 60 lens is supplied nonsterile in an individual plastic case. The lens is shipped dry; or, wet shipped in solution. This solution contains poloxamine, hydroxyalkylphosphonate, boric acid, sodium borate, sodium chloride, hydroxypropylmethyl cellulose, Glucam and preserved with chlorhexidine gluconate (0.003%),
polyaminopropyl biguanide (0.0005%). The case, packing slip or invoice is marked with the base curve radius, dioptric power, diameter, center thickness, lot number, fill date and the color of the lens.

Never reuse the solution. You may store the lens in the unopened container until ready to dispense, up to a maximum of thirty (30) days from the Fill Date. When a lens has been stored for 30 days in its original packaging solution, it should be cleaned and disinfected with an FDA approved product, and placed into inventory as you presently do with any other RGP lens held in your office. Follow the directions on the selected disinfecting solution regarding prolonged storage.
